Yash Roushan

Software & Enterprise IT Professional

Halifax, Nova Scotia | yashroushan@dal.ca | LinkedIn: linkedin.com/in/yash-roushan-8636a1242 | GitHub: github.com/YashRoushan

PROFESSIONAL SUMMARY

Software and enterprise IT professional completing a Bachelor of Computer Science at Dalhousie University, with experience in backend development, Azure migration support, network monitoring, workflow automation, data analysis, and cross-platform technical support. Gathers requirements, troubleshoots across system layers, coordinates with technical and business teams, and documents solutions clearly.

EDUCATION

Bachelor of Computer Science — Dalhousie University 2022–2026
Halifax, Nova Scotia

SKILLS

Programming and web: JavaScript, Java, Python, React, Node.js, Express.js, REST APIs

Data and databases: SQL, MySQL, MongoDB, Firebase Realtime Database, relational database design

Cloud and automation: Microsoft Azure, Power Automate, Power BI, Excel

Networking and systems: Cisco networking, SolarWinds, Cisco ISE, ServiceNow, RT ticketing, LDAP, Windows, macOS, Linux

Ways of working: Git and GitHub, requirements gathering, testing, debugging, troubleshooting, technical documentation, stakeholder and vendor communication, Agile collaboration

PROFESSIONAL LEARNING

- Cisco Certified Network Associate (CCNA) v1.1 (200-301) Cert Prep — LinkedIn Learning course completion
- Microsoft Azure Fundamentals (AZ-900) Cert Prep by Microsoft Press — LinkedIn Learning course completion
- Python Data Structures — University of Michigan via Coursera

PROFESSIONAL EXPERIENCE

OBT IT Analyst — Irving Oil Saint John, New Brunswick | January 2026–Present

- Support enterprise applications and operational workflows during modernization and migration initiatives.
- Gather end-user and administrator feedback and translate it into focused technical investigation and follow-up.
- Maintain documentation covering application ownership, integrations, dependencies, configurations, and support procedures.
- Investigate application data and workflow issues and coordinate resolution across business and technical teams.

Network Analyst Co-op — Irving Oil Saint John, New Brunswick | September 2025–January 2026

- Translated Service Desk and Cloud team requirements into SolarWinds dashboards and monitoring configurations.
- Configured, tested, and validated network nodes to support accurate monitoring coverage.
- Investigated stale Cisco ISE nodes, troubleshot monitoring and configuration issues using ServiceNow, and documented findings and changes.

PROFESSIONAL EXPERIENCE

Backend Developer — Worsship Remote | March 2025–September 2025

- Developed Node.js services, REST APIs, and SQL-backed data workflows connecting React interfaces with relational data.
- Designed relational database schemas with attention to data integrity and maintainability.
- Gathered requirements, tested and debugged across application layers, participated in technical reviews, and documented decisions in a distributed Agile team.

IT Technical Assistant Co-op — Dalhousie University Halifax, Nova Scotia | January 2025–April 2025

- Diagnosed hardware, software, network, authentication, and application issues across Windows, macOS, and Linux.
- Imaged and configured devices, deployed software, supported RT and LDAP-based systems, and validated changes before handoff.
- Developed SQL and Power Automate solutions for internal workflows, created Excel dashboards, gathered requirements, and documented procedures.

Data Analyst Intern — Dresma.ai Delhi, India | December 2021–September 2022

- Analyzed and validated datasets using Python and MySQL and investigated data-quality issues affecting application workflows.
- Documented ETL, database, and technical processes to make recurring work easier to understand and repeat.
- Created Excel and Power BI reports for technical and business stakeholders.

SELECTED PROJECTS

DalChess Code — Junior Software Developer April 2024–September 2024

- Contributed full-stack features to a team-built tournament administration application using React, Node.js, Express.js, REST APIs, and MySQL.
- Worked across frontend, API, backend, and database behaviour while gathering requirements, troubleshooting issues, and documenting decisions.

Jobify — Full-Stack Developer September 2023–December 2023

- Built and deployed a full-stack job-tracking application using React, Node.js, Express.js, MongoDB, and REST APIs.
- Implemented CRUD, persistent storage, responsive interfaces, and user-account workflows; tested and debugged behaviour across the stack.

Quick Cash — Mobile App Developer January 2024–April 2024

- Contributed dashboard and navigation interfaces, UI tests, location detection, Firebase-backed job-posting persistence, and preference storage to a team-built Android application.
- Added credit-card and CVV validation and refactored related Java code.

ADDITIONAL EXPERIENCE

Software Team Member — Dalhousie Combat Robotics September 2024–Present

- Maintain the team website through content updates, registration and announcement support, troubleshooting, code review, and team coordination.

Course Representative — Server-Side Scripting (CSCI 2170), Dalhousie University September 2023–December 2023

- Gathered, documented, and communicated student feedback to support course improvements and clearer communication between students and faculty.
