Yash Roushan

+1(902-412-8887) | Yash.Roushan@dal.ca | LinkedIn/Yash | Github/Yash

Summary

Detail-oriented computer science student with a strong foundation in Cloud Transformation, Network Infrastructure, and Business Process Optimization. Proven success in bridging technical infrastructure with business-facing systems during large-scale migrations. Expert in translating complex technical data into actionable business insights and driving user adoption through feedback-driven design.

Education

Bachelor of Computer Science Sept/2022 – Sept/2026
Dalhousie University *Halifax, NS*

Skills

Technical Skills: Cisco Networking, Network Configuration, Infrastructure Technologies, SolarWinds, Java, SQL, React, NodeJS, Python, PowerShell, HTML, C#, C
Analytical & Business Skills: Requirements Gathering, Documentation, Process Understanding, Initiative Tracking, Cross-Team Collaboration
Tools & Platforms: Git, Docker, Power Automate, Excel, Google Cloud Platform, Tableau, PowerBI, SQL Server, PyCharm, IntelliJ, Eclipse
Soft Skills: Organizational Skills, Troubleshooting, Communication, Collaboration, Risk Assessment, Problem-Solving
Certifications: Cisco Certified Network Associate, AZ - 900, Web Development, Python

Experience

OBT IT Analyst (***Project Management, Business Analysis, Quality Analysis***) Jan 2026 – Present
Irving Oil (Operational Business Technology - Solutions) *Saint John, NB*

- Orchestrated feedback systems for the Eastern Canada Paperless Pilot, designing driver/admin feedback loops that directly improved user adoption and iteration speed.
- Facilitated the Kyndryl to Azure migration by maintaining technical documentation and network maps to ensure system visibility and platform accuracy post-transition.
- Supported the enterprise-wide Adobe to Tungsten migration, managing application ownership and licensing implications to ensure business continuity.
- Operated within high-trust GE Meridium industrial systems, aligning operational data with enterprise decision-making and asset management goals.
- Acted as a technical bridge between networking teams and business stakeholders, ensuring system governance and clarity during multi-platform modernization.
- Documented system logic and workflow transitions to support internal knowledge sharing and maintain clarity across cross-functional teams.
- Assembled and tested Raven in-truck devices for the Operational Business Technology - Services team, demonstrating cross-functional capabilities.

Network Analyst Co-op (***SolarWinds, Cisco ISE, Excel, ServiceNow***) Sept 2025 – Jan 2026
Irving Oil (IT Infrastructure - Network) *Saint John, NB*

- Designed and built new SolarWinds dashboards for Network and Service Desk teams, improving visibility of network health and business workflows.
- Added and validated new network nodes, ensuring correct configuration, monitoring coverage, and alignment with network architecture.
- Identified and removed outdated/stale nodes from Cisco Identity Services Engine (ISE) to maintain clean and accurate authentication systems.
- Collaborated with vendors to provide device updates, clarify technical details, and assist with troubleshooting and maintenance cycles.

- Worked closely with Service Desk and Cloud teams to understand their needs and design Network Monitoring Systems that improved business processes and operational efficiency.
- Documented findings, decisions, and dashboard logic to support internal knowledge sharing and process clarity.

Backend Developer (***JavaScript, Node.js, React, SQL***) March 2025 – Sept 2025
Worsship (Remote)

- Engineered a scalable backend architecture using Node.js and SQL to support digital operations and centralized data management for an international organization.
- Collaborated in an agile, remote environment with a global team of developers and designers to deliver a unified and responsive web experience across multiple platforms.
- Designed and optimized relational database schemas to manage member data, scheduling, and organizational resources with a focus on security and integrity.
- Integrated RESTful APIs to bridge the gap between user-facing React components and server-side logic, ensuring high performance and low-latency interactions.
- Participated in distributed code reviews and technical syncs, maintaining high code quality and architectural consistency across multiple time zones.

IT Technical Assistant Co-op (***React, SQL, Excel, Network Tools***) Jan/2025 – Apr/2025
Dalhousie University *Halifax, NS*

- Provided technical support and troubleshooting for IT infrastructure, contributing to network issue resolution.
- Collaborated on operational upgrades and automation initiatives using SQL and Power Automate.
- Supported documentation of IT processes and contributed to workflow understanding for internal teams.
- Created Excel-based dashboards to monitor infrastructure performance and enhance data-driven risk assessment.
- Assisted with troubleshooting and configuration updates within infrastructure systems.

Data Analyst Intern (***Python, MySQL, GitHub, JavaScript, Power BI***) Dec/2021 – Sept/2022
Dresma.ai *Delhi, India*

- Performed data analysis to support product insights and business decision-making.
- Created documentation for ETL processes, ensuring clarity and consistency in automation workflows.
- Built reports in Excel and Power BI to communicate trends with stakeholders.

Technical Projects

Junior Software Developer (***SQL, React, Node, JavaScript***) Apr/2024 – Sept/2024
Dalchess Code

- Built dashboards for monitoring and tracking tournament data with React, SQL, and Node.
- Contributed to risk identification and supported backend enhancements for performance resilience.

Full Stack Developer (***React, Node, Express, MongoDB***) Sept/2023 – Dec/2023
Jobify - Job Tracker Webpage

- Developed a full-stack job tracking system with cloud deployment and data security in mind.
- Ensured system reliability and scalability through testing and backend optimization.

Mobile App Developer (***Android Studio, Java, Firebase***) Jan/2024 – Apr/2024
Quick Cash – Marketplace App Link

- Created a transactional Android app using Java and Firebase, integrating real-time data flow and user testing features.

Extracurricular Activity

Software Team Member - Dalhousie Combat Robotics Team Sept/2024 – Present

- Maintained society web infrastructure and contributed to technical discussions regarding risk mitigation.

Course Representative - Server Side Scripting (CSCI 2170) Sept/2023 – Dec/2023

- Facilitated curriculum enhancements by gathering technical feedback and advocating for student needs.
